

Collabria CMS

Content Management User Guide

Version 1.1 — May 2026
collabrainc.com/admin

1 Getting Started

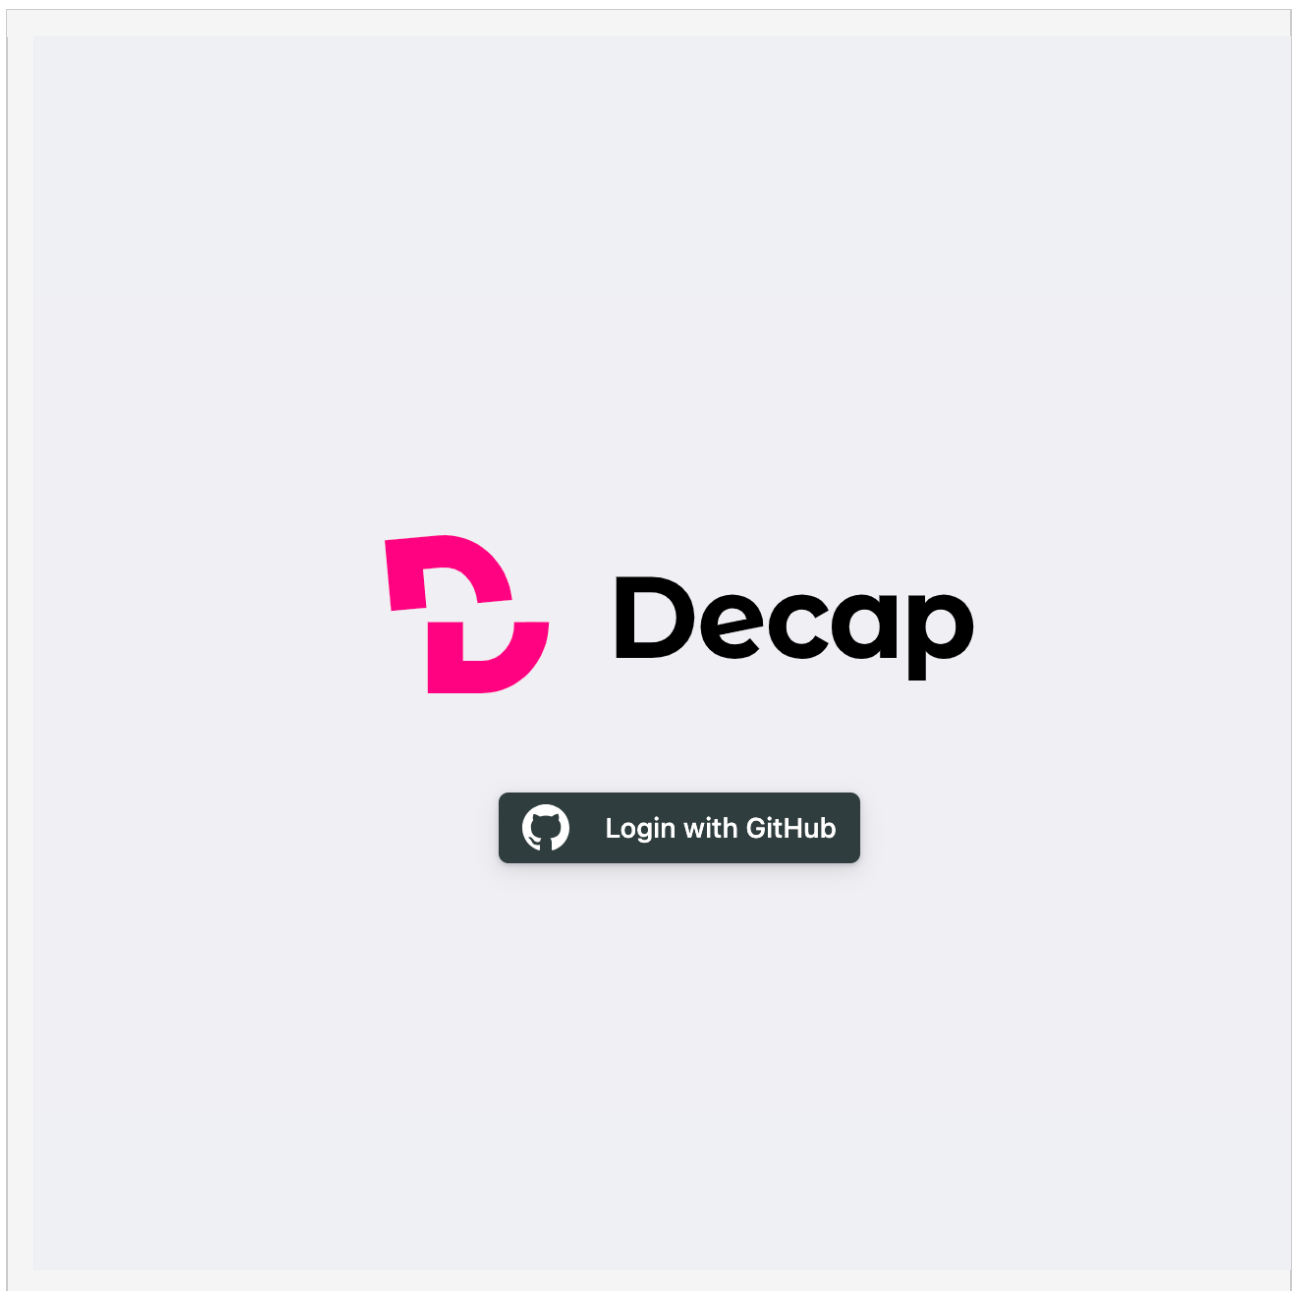

1.1 Accessing the Admin

Your content management address is:

`https://collabria.com/admin`

Bookmark this URL — it is the only address you need.

1.2 Logging In

The Collabria CMS login screen.

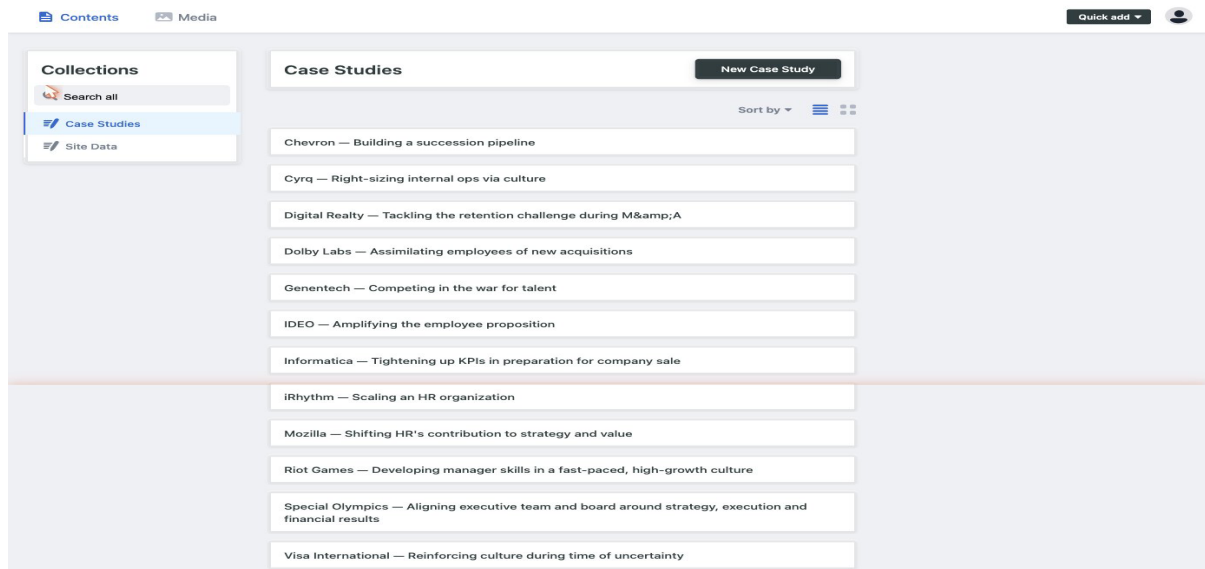

1. Go to <https://collabriainc.com/admin>
2. Click the "Login with GitHub" button
3. You will be redirected to GitHub to confirm access — click "Authorize"

- You will be returned to the dashboard automatically

Tip

If you see a GitHub login page asking for your username and password, sign in with your GitHub account credentials. Once authorised you will not need to log in again for several weeks.

1.3 The Dashboard

The CMS dashboard. Use the left sidebar to switch between sections.

Once logged in you will see two sections in the left sidebar:

- Case Studies — all client success stories shown on the Cases page
- Site Data — contains the Client List, Homepage Quotes, and Services

2 Case Studies

Case studies appear on the Cases page and as rotating quotes on the homepage. Each entry has a client name, a challenge quote, and a solution description.

2.1 Editing an Existing Case Study

The screenshot displays the 'Writing in Case Studies collection' interface. At the top, it shows 'CHANGES SAVED' and buttons for 'Published', 'Delete entry', and 'View on Site'. The left panel has the following fields:

- CLIENT NAME:** A text input field containing 'Chevron'.
- TITLE:** A text input field containing 'Building a succession pipeline'.
- LOGO:** A section with a logo preview, a 'Choose different image' button, a 'Replace with URL' button, and a 'Remove image' button. Below it is a note: 'Upload a new logo or keep the existing path'.
- CHALLENGE QUOTE:** A text area containing the quote: 'How do we ensure we are effectively developing high potentials to be future leaders?'.
- TAGS (OPTIONAL):** A section for adding tags.

The right panel shows a live preview of the case study card. It features the Chevron logo, the title 'Building a succession pipeline', and the challenge quote. Below the quote, it lists the solution: 'Succession Planning', 'Talent Management', and 'Leadership Development'. A 'User Guide' button is visible in the bottom right corner.

A case study open for editing. Left panel: fields. Right panel: live preview.

1. Click "Case Studies" in the left sidebar
2. Click any case in the list — shown as "Client — Title" e.g. "Genentech — Competing in the war for talent"
3. Edit the fields as needed (see descriptions below)
4. Click "Published" then "Publish" to make changes live
5. Click "View on Site" (top right) to confirm the change on the live website

Field descriptions:

CLIENT NAME: The company name displayed on the case card and story page

TITLE: A short phrase describing the engagement

LOGO: Click "Choose an image" to open the media library. Click "Upload" to add a new logo from your computer, or select an existing one. The file is saved automatically to the website.

CHALLENGE QUOTE: The client's challenge in their own words, shown in italics on the story page

TAGS (optional): Keywords shown as small chips — click the ">" arrow to expand each tag

SOLUTION: Full description of the work. Supports bold, italic, and bullet lists using the toolbar.

**Tip**

To add a brand new logo: in the Logo field click "Choose an image" → "Upload" → select the file from your computer. Accepted formats: JPG, PNG. Best results with a square image and a white or transparent background.

2.2 Adding a New Case Study

1. Click "Case Studies" in the left sidebar
2. Click the "New Case Study" button (dark button, top right)
3. Fill in all fields: Client Name, Title, Logo, Challenge Quote, Solution
4. Add 2–3 relevant Tags using "Add tags +"
5. Click "Published" → "Publish" when ready

2.3 Deleting a Case Study

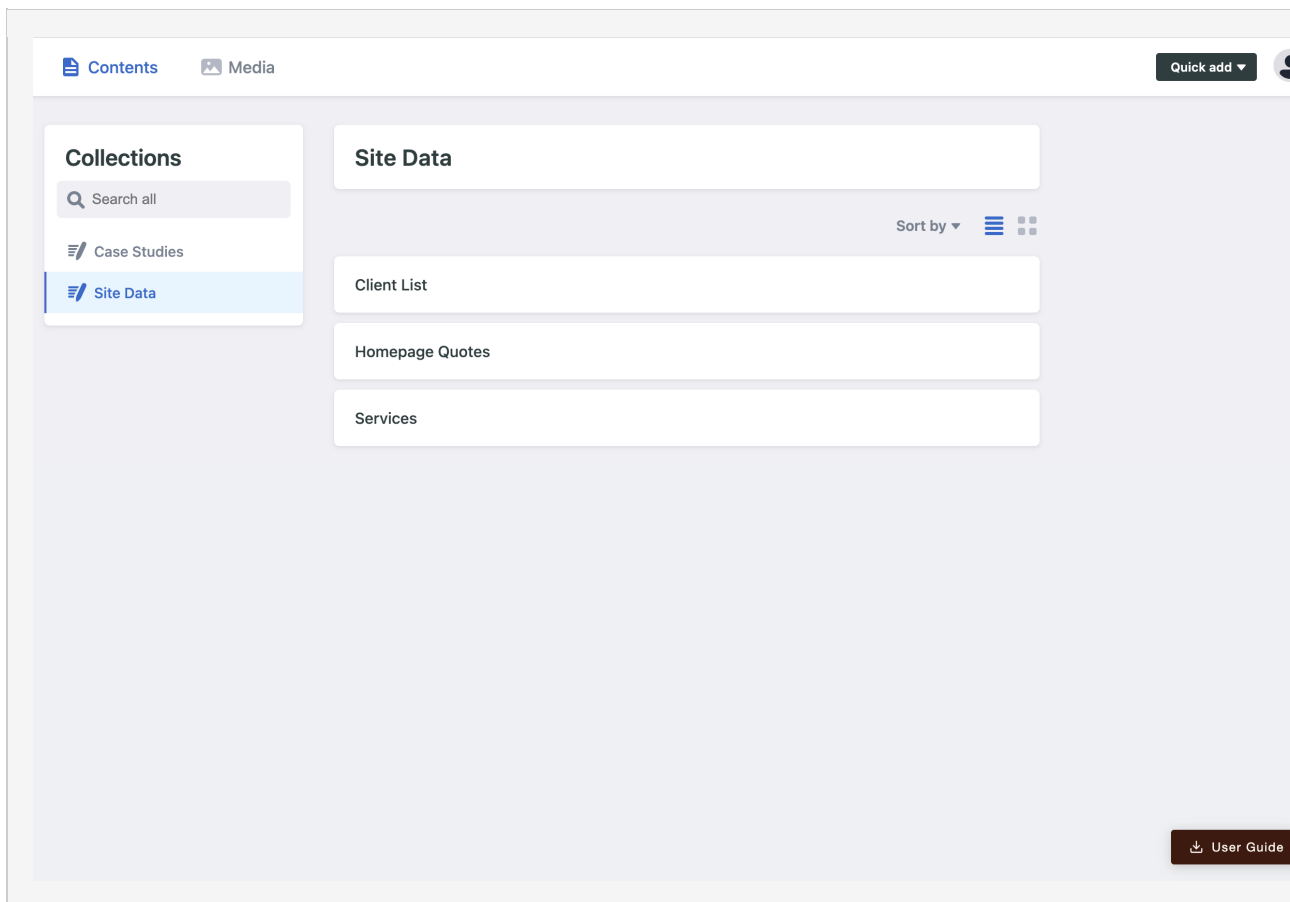

1. Open the case study you want to remove
2. Click "Delete entry" (red button in the top bar)
3. Confirm the deletion

**Important**

Deletion is permanent. The case study will be removed from the website on the next publish and cannot be recovered without developer assistance.

3 Site Data

Site Data contains three files that control different parts of the website. Click "Site Data" in the left sidebar to see them.

The Site Data section — Client List, Homepage Quotes, and Services.

3.1 Client List

The Client List controls the honeycomb grid on the Clients page.

How to open: Click "Site Data" → "Client List"

Each client row can be expanded with the ">" arrow to show two fields:

- COMPANY NAME — The name shown when the logo image cannot load
- LOGO — Click "Choose an image" to upload a new logo or select an existing one from the library

To upload a new logo:

1. Expand the client row with ">"
2. Click "Choose an image" in the Logo field
3. Click "Upload" in the media library panel that opens
4. Select the logo file from your computer (JPG or PNG recommended)
5. The file uploads to the website automatically — click "Publish" to go live

To reorder clients:

- Drag the ≡ handle on the left of any row up or down
- Click "Published" → "Publish" to update the live site

To add a client:

1. Scroll to the bottom and click "Add clients +"
2. Enter the Company Name and upload or select a Logo
3. Click "Published" → "Publish"

To remove a client:

- Click the × on the right side of the client row
- Click "Published" → "Publish"

3.2 Homepage Quotes

The five rotating quotes on the homepage hero section are managed here.

How to open: Click "Site Data" → "Homepage Quotes"

Each quote has three fields (click ">" to expand a row):

QUOTE: The full text of the quote. Quotation marks are added automatically by the website.

CLIENT NAME: The attribution shown beneath the quote, e.g. iRhythm

CASE SLUG: The URL identifier linking "Read the story" to the correct case page

Valid case slugs:

`irhythm, cyrq, digital-realty, ideo, special-olympics, mozilla, genentech, riot-games, chevron, dolby, visa, informatica`

To edit: Expand the row, update the fields, click "Published" → "Publish"

To reorder: Drag the ≡ handle, then Publish

To add: Click "Add quotes +", fill all three fields, then Publish

3.3 Services

The three service cards on the homepage are edited here: Leadership Alignment, Organizational Effectiveness, and Culture and Change.

How to open: Click "Site Data" → "Services"

Each service has the following fields (click ">" to expand):

TITLE: The service name shown as the card heading

LEAD SENTENCE: The bold introductory line (Leadership Alignment and Org. Effectiveness only)

PULL QUOTE: An italic quotation (Culture and Change only, replaces Lead Sentence)

BODY: The main description paragraph

BULLET POINTS: The three capability lines at the bottom. Use "Add item +" to add, × to remove, ≡ to reorder.

To edit a service: Expand the row, update the fields, click "Published" → "Publish"

 Important

Do not add or remove services — the homepage layout is designed for exactly three. Only edit the content within existing service rows.

4 Publishing Changes

Every time you click "Publish":

1. Your change (including any uploaded logos) is saved to the code repository
2. The website rebuilds automatically — approximately 30 seconds
3. The live site is updated

To confirm a change is live:

- Click "View on Site " in the top-right corner of any editor
- This opens the relevant live page in a new browser tab
- If the change is not yet visible, wait 30 seconds and refresh

Save	Stores a draft in the CMS. Changes are NOT live yet.
Publish	Sends the change to the live website immediately.

5 Troubleshooting

Logo does not appear on the site

If you used the upload button, wait 60 seconds and hard-refresh the page (Cmd+Shift+R on Mac, Ctrl+Shift+R on Windows). If it still does not appear, try re-uploading the logo — the file name must not contain spaces or special characters.

Changes are not showing on the live site

Wait 60 seconds, then do a hard refresh:

- Mac: Cmd + Shift + R
- Windows: Ctrl + Shift + R

Logged out of the CMS

Return to <https://collabria-astro.vercel.app/admin> and click "Login with GitHub".

Logo upload fails or image looks wrong

- Make sure the file is JPG or PNG format
- Keep the file size under 2 MB for best results
- Use a square image with a white or transparent background
- Avoid spaces and special characters in the filename

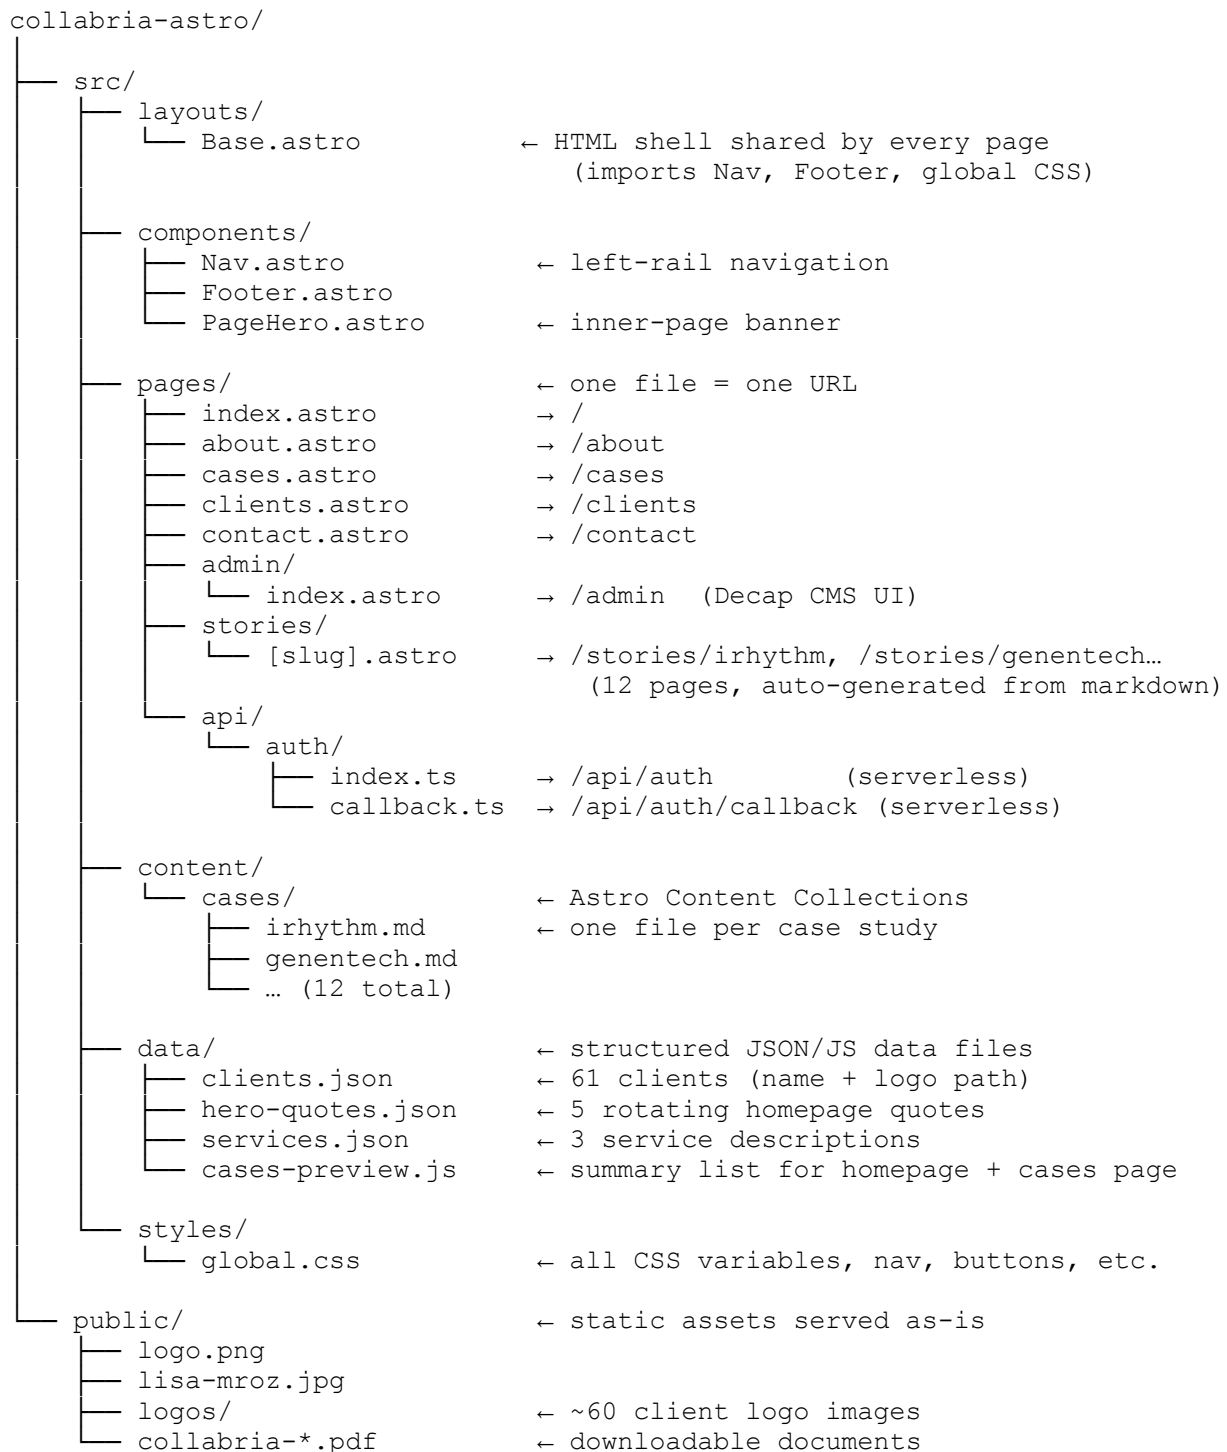

Appendix 1: Collabria Architecture

Here's a complete picture of how everything fits together.

The Architecture

Framework: Astro (hybrid mode)

Astro runs at build time and generates static HTML for every page. "Hybrid mode" means most pages are pre-built (fast, served from CDN), but two API routes run as serverless functions on demand.

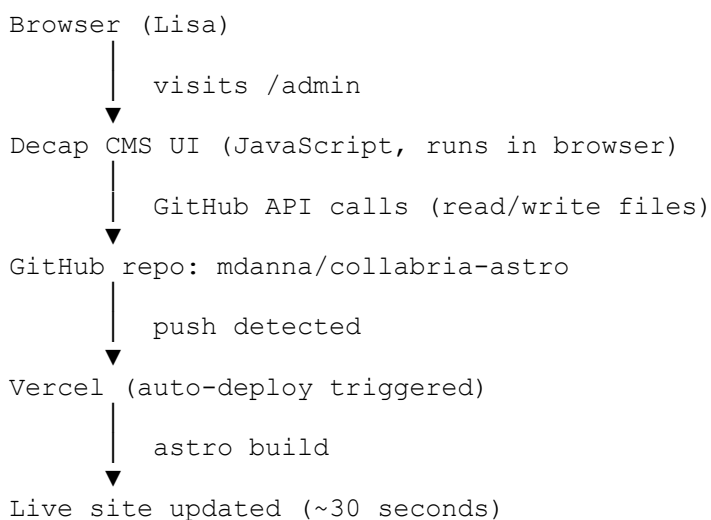

How a page works at build time:

[slug].astro reads cases/*.md
↓
Astro builds /stories/irhythm, /stories/genentech... as static HTML
↓
Vercel serves them from CDN — no server involved at request time

The CMS

Tool: Decap CMS (git-based)

Decap is a single-page React app that runs entirely in the browser at /admin. It has no database — it reads and writes directly to the GitHub repository via the GitHub API.

Authentication flow (the two serverless functions):

What Decap can read/write:

CMS section	File it edits	Format
Case Studies	src/content/cases/*.md	Markdown + frontmatter

CMS section	File it edits	Format
Client List	src/data/clients.json	JSON array
Homepage Quotes	src/data/hero-quotes.json	JSON
Services	src/data/services.json	JSON
Logo uploads	public/logos/*.jpg	Binary image

The Hosting

Platform: Vercel

```

GitHub repo (source of truth)
  ↓
  push to main branch
  ↓
Vercel build pipeline
- runs: npm run build (= astro build)
- outputs: static HTML + 1 serverless function bundle
  ↓
Vercel CDN (static pages) + Vercel Functions (OAuth endpoints)
  ↓
collabria-astro.vercel.app  (soon: collabriainc.com)

```

Two types of output:

- **Static pages** (/ , /about, /cases, /clients, /contact, /admin, /stories/*) — pre-built HTML, served from Vercel's CDN globally, near-instant load, zero server cost
 - **Serverless functions** (/api/auth, /api/auth/callback) — run on demand in Node.js, only invoked during CMS login
-

The Full Flow when publishing a Page

1. Lisa edits a case study in /admin
2. Decap sends a GitHub API request: PATCH src/content/cases/irhythm.md
3. GitHub commits the change to main branch
4. Vercel detects the push → triggers a new build
5. Astro re-reads the markdown file
6. Generates new static HTML for /stories/irhythm
7. Deploys to CDN
8. Live site updated — total time ~30 seconds

No server is running permanently. No database. No hosting bill beyond Vercel's free tier (for this traffic level).

Appendix 2: How to publish the site to www.collabriainc.com

Here are the exact steps for IONOS:

Step 1 - Add the domain to Vercel first

1. Go to your **collabria-astro** project in the Vercel dashboard
 2. **Settings** → **Domains**
 3. Add collabriainc.com and www.collabriainc.com
 4. Note the DNS values Vercel gives you (they should match what's below, but always use what Vercel shows)
-

Step 2 - Update DNS in IONOS

1. Log in at ionos.com → **Domains & SSL**
2. Click the ≡ **menu** next to collabriainc.com → **DNS**
3. You'll see a list of existing DNS records

Delete or replace the existing **A record for @** (it currently points to the old hosting), then:

Type	Name	Value	TTL
A	@	76.76.21.21	3600
CNAME	www	cname.vercel-dns.com	3600

If IONOS doesn't allow a CNAME on `www` when an A record exists for `@`, delete the old `www` record first.

4. Click **Save**
-

Step 3 - Wait

Propagation with IONOS typically takes **15–60 minutes**. Vercel will automatically issue the SSL certificate once it detects the domain. You can monitor status in Vercel under **Settings** → **Domains** — it will show a green checkmark when active.

Step 4 - After it goes live, run these two updates

In the Vercel dashboard → **collabria-astro** → **Settings** → **Environments** → **Production**:

- Change `SITE_URL` from `https://collabria-astro.vercel.app` to `https://collabriainc.com`

In **GitHub** → github.com/settings/developers → **Collabria CMS OAuth App**:

- Change the Authorization callback URL to `https://collabriainc.com/api/auth/callback`

Then do one final redeploy so the new `SITE_URL` takes effect:

```
cd /Users/mario/collabria-astro && vercel --prod
```

That's it — `collabriainc.com` will serve the new Astro site with HTTPS and the CMS will continue working normally.

End of document
